

Abortion Stance and Religious Views

Maisha Crockett ,Devin White, Kierra Woodard

Department of Behavioral Sciences & Human Services, Bowie State University

SOCI 413: Data Analysis Seminar

HYPOTHESES

1. Our hypothesis is that the more the person attended church the less likely they will be pro abortion.

•Results

- The higher the score for church attendance the lower the score for abortion.

Religiousness/abortion rights stance

$r = -.31$ $p = .023$

PARTICIPANTS

- 54 Students
- 49 Women/5 Men
- Average age = 22
- Race
 - African American(N =51)
 - Latino(a) (N =1)
 - Asian (N =1)
 - Middle Eastern (N =1)

MEASURES

- Spirituality(yes=2, somewhat=1,no=0)
- Church attendance(Frequently=3, occasionally=2, holidays only=1, never=0)
- Pro abortion(Strongly agree=3, agree=2, disagree=1, strongly disagree=0)

DISCUSSION

The results from this study suggest the following:

- The more spiritual and the more the person attend church the least likely they were to be in favor of abortion.
- Limitations we experienced was the pandemic, limited amount of questions we could ask on the survey and how we collected the data
- Strengths were that we were assisted with creating survey, received timely responses and data was complied for us.
