

What's up with fentanyl?

Strong

Fentanyl is a very strong opioid, **50x stronger** than heroin.

Fast

Overdose can happen in **seconds or minutes**.

Higher Risk

Most overdose deaths in WA State now involve fentanyl.

What does it look like?

In WA State, most fentanyl has been in blue pills with a "M30" stamp. It's sometimes in drugs that look like powder, or a rock like crack cocaine.

Fentanyl could be in any drug you buy on the street or online. What fentanyl looks like will continue to change.

What's the risk?

The amount and strength of fentanyl **can vary a lot**.

One pill might have a deadly amount.

Another pill might have very little, if any, fentanyl.

Naloxone works on fentanyl.

Carry naloxone. Tell people you have it and how to use it. Because fentanyl is so strong, it may take more than one dose to work. Keep extra kits around.

Meth does not protect from OD.

Using meth along with fentanyl actually **increases the chance of overdose**.

If you use both meth and fentanyl, use one at a time, and pace yourself slowly with small amounts.

Mythbusting Facts

1

You can overdose on fentanyl however you use it: if you smoke, swallow, snort, or inject.

2

It's safe to respond to a fentanyl overdose! You can't overdose just by touching fentanyl or drugs that contain fentanyl.
